

IAN DUDLEY ALOJADO

Backend Developer

<https://iandude.github.io/portfolio/> • iandudley012@gmail.com • 09460995267

Summary

Aspiring backend developer with hands-on experience building RESTful APIs, authentication systems, and RBAC-based authorization using JavaScript, MySQL, and Sequelize. Proven ability to deliver in fast-paced, collaborative settings through a client project and a team-built web game. Eager to contribute to building scalable, secure applications as a backend developer.

Experience

Dynamic Global Soft Inc.

Backend Developer Intern

Taytay, Rizal

February 12, 2026 – May 12, 2026

- Studied and improved an existing backend boilerplate codebase, analyzing package usage, file structure, and core middleware implementations
- Implemented and tested CSRF protection, CORS configuration, and Helmet security headers to strengthen application security
- Developed a password recovery flow using Nodemailer and Gmail, implementing forgot-password and reset-password endpoints with secure token-based reset links
- Designed and implemented a Role-Based Access Control (RBAC) system using Sequelize migrations and seeders, including permission middleware applied across user and file routes
- Mapped and validated barangay-level geographic JSON files organized by municipality, province, and region by developing a search script that accepts any of these as input and recursively compiles all corresponding geographic subdivisions down to the barangay level

Projects

D-Crypt Battle

2025

HTML, CSS, JavaScript, Babylon.js

- Collaborated with a 4-member team to develop a web-based cryptography game featuring interactive single-player and real-time multiplayer game modes
- Built and animated the techniques section, visualizing the encryption and decryption process of the Caesar cipher, Vigenère cipher, Transposition cipher, and AES, to make complex concepts accessible and engaging for players

Education

Taguig City University

Bachelor of Science in Computer Science

Taguig City, Metro Manila

June 2026

- Graduated with Latin Honors
- 1st Runner Up in TCU Systems' Fair 2025
- Thesis: "D-crypt Battle: Development of a Gamified Learning Platform Incorporating Cryptography with Data Analytic using Levenshtein Distance Algorithm and Random Forest Algorithm"

Skills

- **Languages:** JavaScript, Java, HTML, CSS
- **Frameworks and Libraries:** React, Express.js, Sequelize, Babylon.js
- **Databases:** MySQL, MongoDB, Firebase (Firestore)
- **Tools and Platforms:** Git/Github, Node.js
